ADI VAMSI SAI

San Antonio, TX · +1 361-300-5950 · adivamsi1998@gmail.com · LinkedIn · GitHub · Portfolio
Open to relocate anywhere in the U.S. · Immediately available · STEM OPT authorized

Technical Skills

Languages : Python, Java (8/11), JavaScript, SQL
Backend & Data : REST APIs, Microservices, Spring Boot, Node.js, Express, PostgreSQL, Prisma ORM, Hibernate/JPA, WebSockets
AI & Cloud : LLM APIs, RAG, Prompt Engineering, AI Agents, PyTorch, Docker, AWS, Git, Linux, Agile/Scrum

Experience

Python Developer | DATARA Pvt Ltd **May 2025 – Present**
Backend & AI Engineering *San Antonio, TX / Remote*

- Engineered asynchronous Python backend services processing data-driven workflows, reducing pipeline turnaround from 10 hours to 8 hours (20% throughput gain) through async execution and query optimization.
- Integrated LLM APIs and prompt-engineered classification pipelines into production automation, eliminating 35% of manual data extraction and categorization tasks across core business workflows.
- Modernized legacy Python modules with standardized error-handling and design patterns, cutting post-deployment incident rate from ~20 incidents/month to ~17 incidents/month (15% reduction).
- Reduced critical backend issue resolution time from 48 hours to 12 hours through structured debugging workflows and iterative feature delivery.
- Architected modular API integration layer supporting rapid onboarding of new product requirements while maintaining 99.9% system uptime.

Junior Software Engineer | XRG Consulting (Client: New Relic) **Jun 2020 – Dec 2022**
Backend Engineering – Observability Platform *Hyderabad, India*

- Built and maintained Java 8/11 Spring Boot backend services for a large-scale observability platform serving millions of daily queries across distributed microservices.
- Designed and optimized REST API contracts across microservices, reducing inter-service latency by ~15% through payload restructuring and architectural improvements.
- Tuned Hibernate ORM queries and database interaction patterns, improving backend throughput and reliability under sustained production load.
- Automated data validation, log analysis, and API regression testing with Python scripts, reducing manual QA cycle time by ~30%.
- Refactored legacy backend components and expanded test coverage on critical paths, reducing page load times by ~10% and lowering production defect rate.

Projects

Indian SME Engine | *Node.js, Express, PostgreSQL, Prisma, WebSockets, JWT, LLM APIs* **2025**
↗ github.com/AdiVamsi/indian-sme-engine

- Built an LLM-powered multi-tenant CRM for Indian SMBs: captures leads from web forms and WhatsApp, auto-classifies and scores them via AI, and surfaces prioritized follow-ups through a real-time operator dashboard.
- Engineered full backend: JWT auth, multi-tenant data isolation, WebSocket real-time updates, lead management APIs, and AI-driven scoring engine. 100+ commits, actively developed.

Agent Hub | *Python, AI Agents, Karpathy AutoResearch Pattern, Agentic Orchestration* **2025**
↗ github.com/AdiVamsi/agent-hub

- Created a self-improving agent platform where each agent autonomously optimizes a real-world problem via a 3-primitive loop (program.md → artifact → scalar metric → git commit or reset), running ~12 experiments/hour.
- Designed meta-agent coordination layer enabling hands-off overnight optimization loops with clean git history of incremental gains; pluggable into Claude, Codex, or any LLM provider.

Education

Webster University, San Antonio, TX Jan 2023 – Jan 2025
Master's in Information Technology Management — GPA: 3.8/4.0

GITAM Deemed University, Hyderabad, India Jun 2016 – Jun 2020
Bachelor's in Computer Science Engineering

Certifications

AWS Certified Cloud Practitioner · Amazon Web Services
Oracle Certified Associate Java SE 17 Developer · Oracle
